

NEW GUIDE PROFILE

„ GSPW 95 “

After hours of thought, calculations, studies and numerous tests finally a new guide profile is designed which combines improved performance and functionality.

Improved function between hook and guide. The new design of the guide ensures the excellent fitting of the hooks on the guide when windload is being applied.

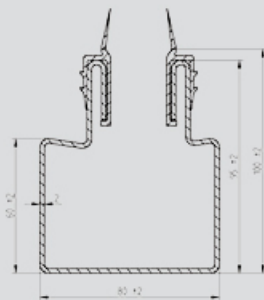

Space economy. Except the higher performance, the guide GSPW 95 is now smaller than the guide GSPW 110.

Simplicity on the choice of the appropriate guide. Its unique design gives the opportunity to be used in any width and windload.

Cost efficient. GSPW 95 will have the same price as GSPW 80.

---- New technical instructions in replacement of the old ----
